Judith E. Grass received a Ph.D. in Computer Science in 1986 from the University of Illinois, Urbana. She also holds Masters degrees from Illinois in both Slavic Linguistics and Computer Science. Since 1986 she has been a Member of Technical Staff in the Advanced Software Technology Department of AT&T Bell Laboratories. Her main research interests include software development tools, object-oriented technology, programming languages and Cyrillic-friendly window systems (the search for the one *true* KOI-8). Dr. Grass can be reached at grass.ulysses.att.com.

Markku Sakkinen received his B.Sc., M.Sc., and Licentiate degrees from the University of Jyväskylä, Finland, (his native town) in the early seventies. His major subject at this time was mathematics, but all his jobs since have been computer-related. He started to do computer science research around 1986, and soon focussed on the fashionable field of object-oriented programming. He has published several papers and done some refereeing, e.g. as a programme committee member for ECOOP'91 and ECOOP'92. Mr. Sakkinen is also a regular contributor to *ACM Computing Reviews*. He hopes to get his Ph.D. at long last this year; addiction to Usenet news may have been one delaying factor, though the newsgroup discussions have also been a source of inspiration, and a quick and ruthless test bench for new ideas. Mr. Sakkinen can be reached at sakkinen@jytko.jyu.fi.
