EVE: verifying correct execution of cloud-hosted web applications

Suman Jana
Vitaly Shmatikov
The University of Texas at Austin

Running interactive web-apps in the cloud

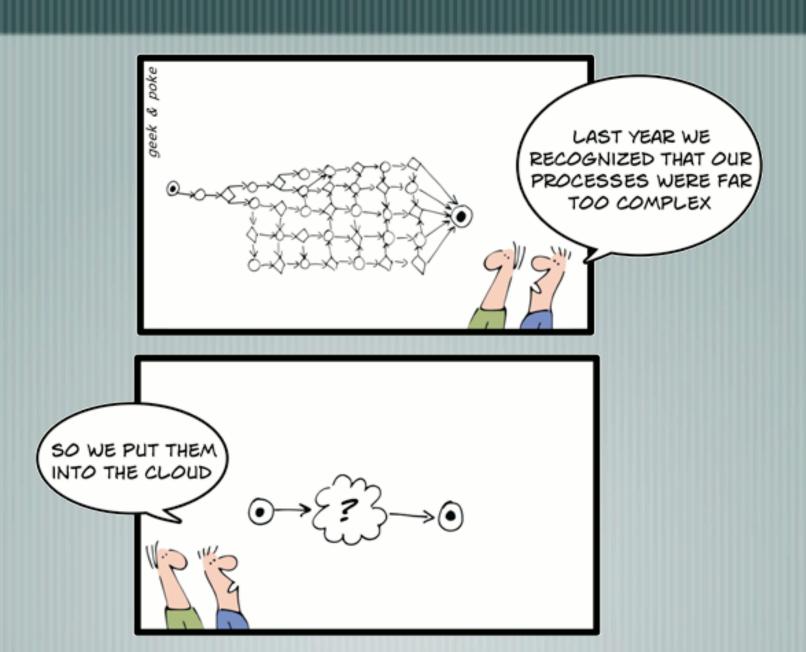

Running interactive web-apps in the cloud

Running interactive web-apps in the cloud

Low visibility in the cloud

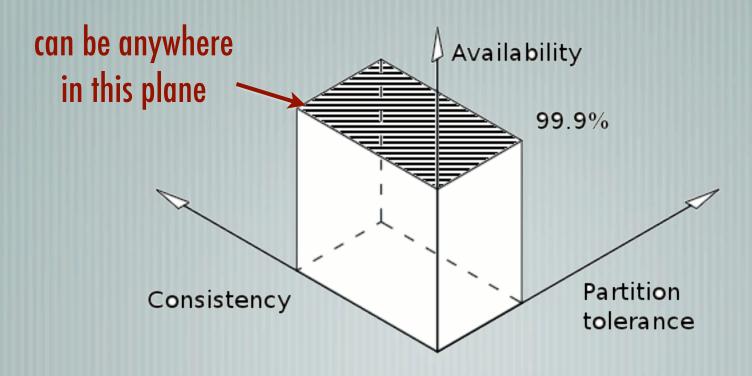

Availability is not correctness

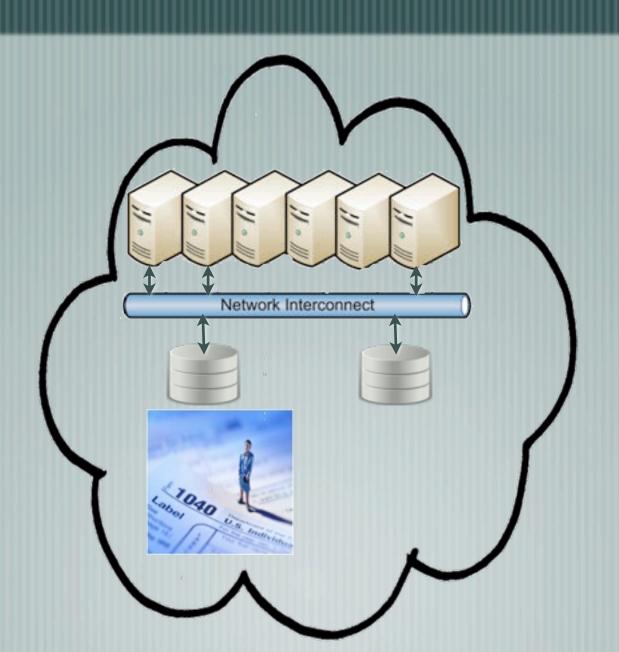

"Google will make commercially reasonable efforts to keep the App Engine service operational and available to customer at least 99.95% of the time in a monthly billing cycle"

Availability is not correctness

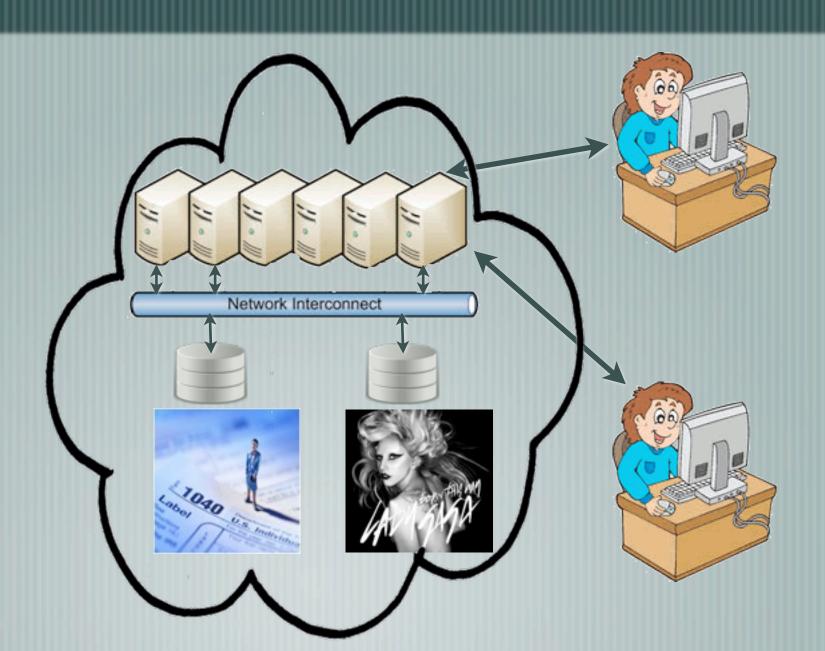

"Google will make commercially reasonable efforts to keep the App Engine service operational and available to customer at least 99.95% of the time in a monthly billing cycle"

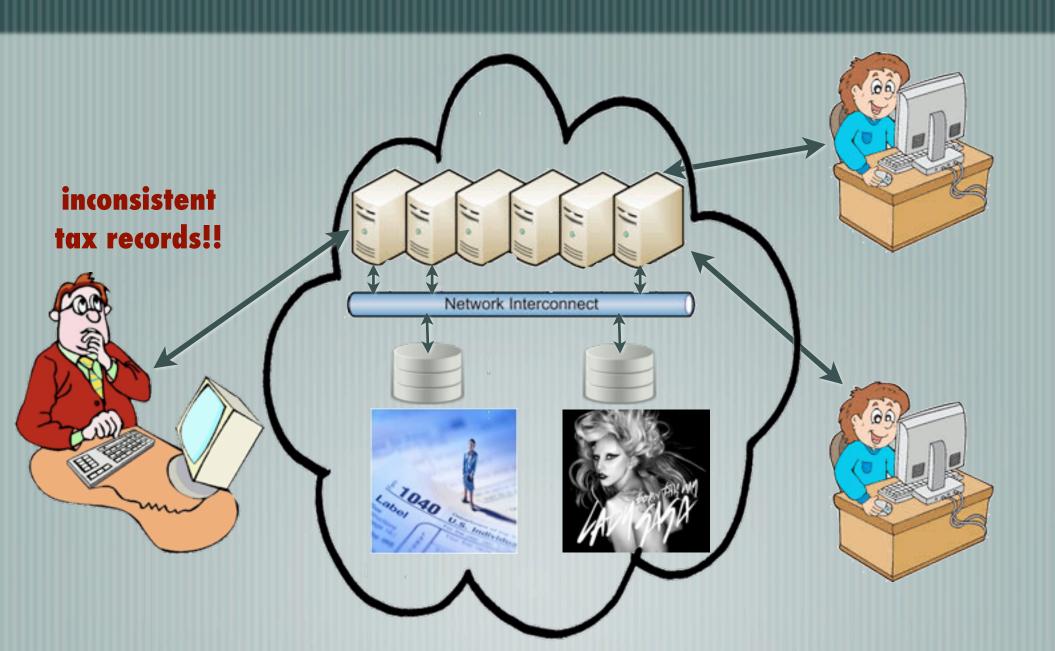

Errors can be transient

Errors can be transient

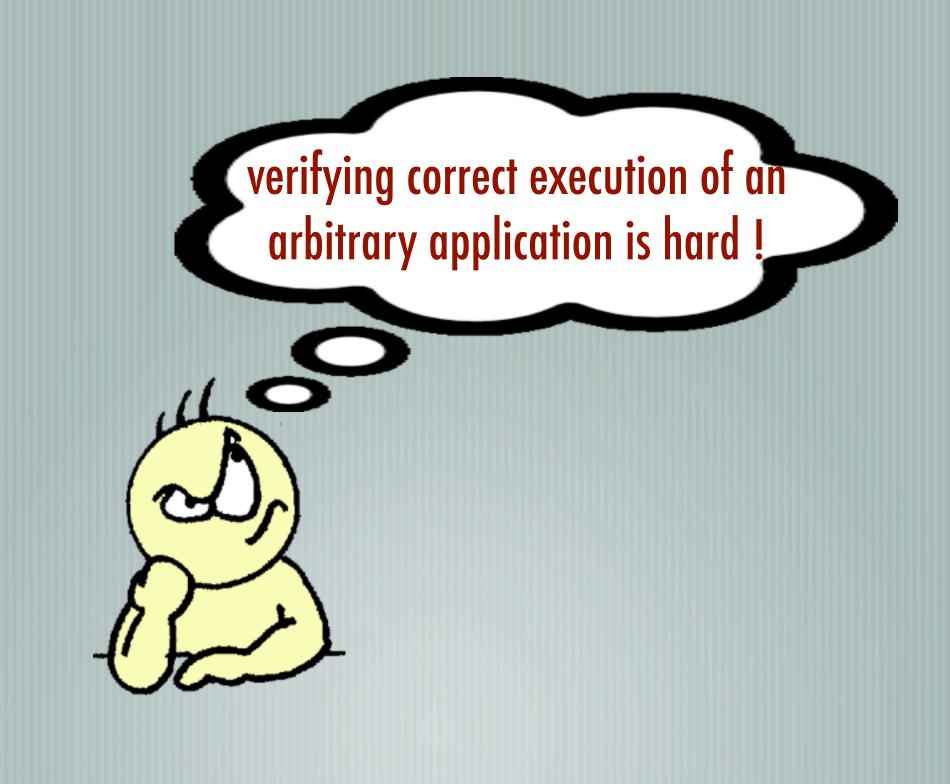

Errors can be transient

Requirement

continuously monitor correctness of cloud execution

What kind of apps run on cloud?

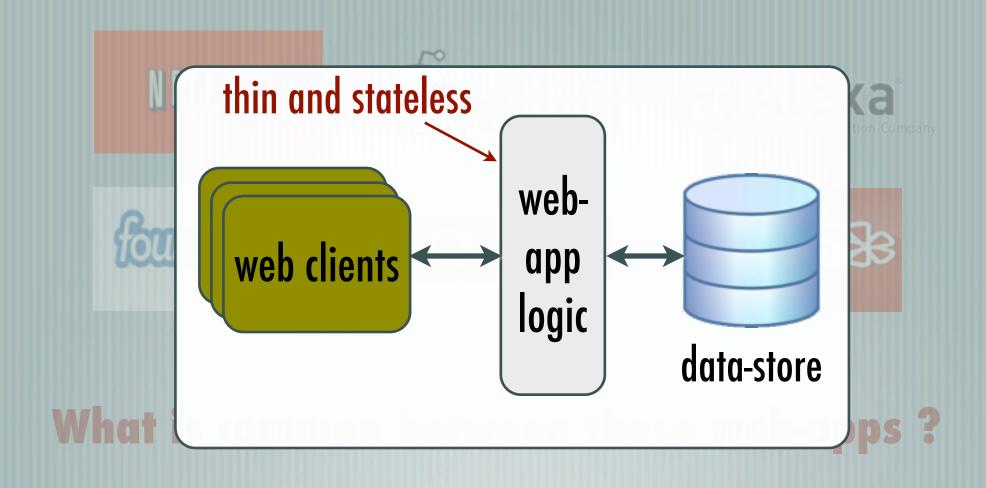

What is common between these web-apps?

What kind of apps run on cloud?

Correctness of web-app ops

Thou shalt always think of web-app operations in terms of data-store operations!

Consistency of data-store ops

Thou shalt always think of web-app operations in terms of data-store operations!

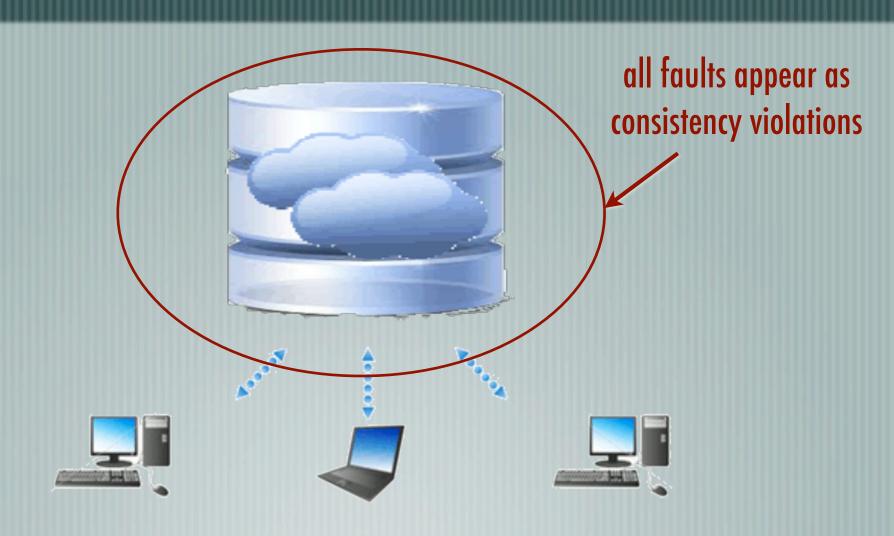

Web app ops as data-store ops

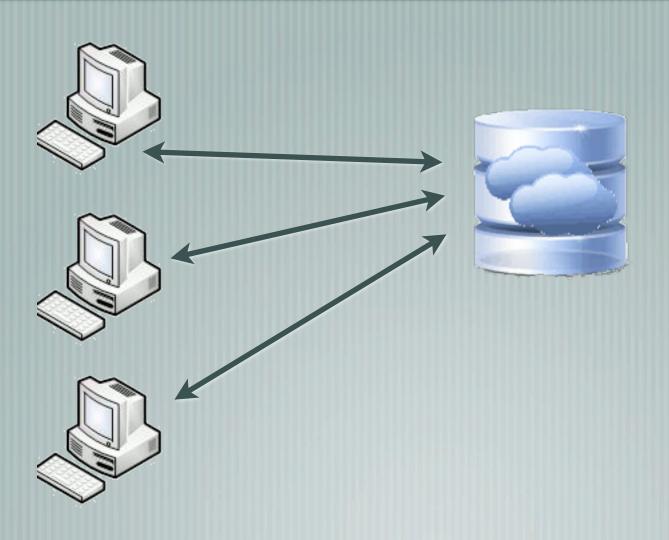

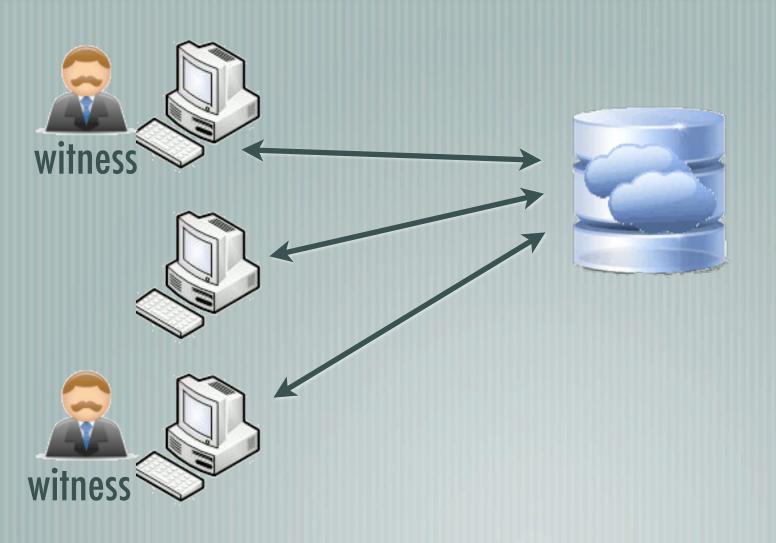

Web app ops as data-store ops

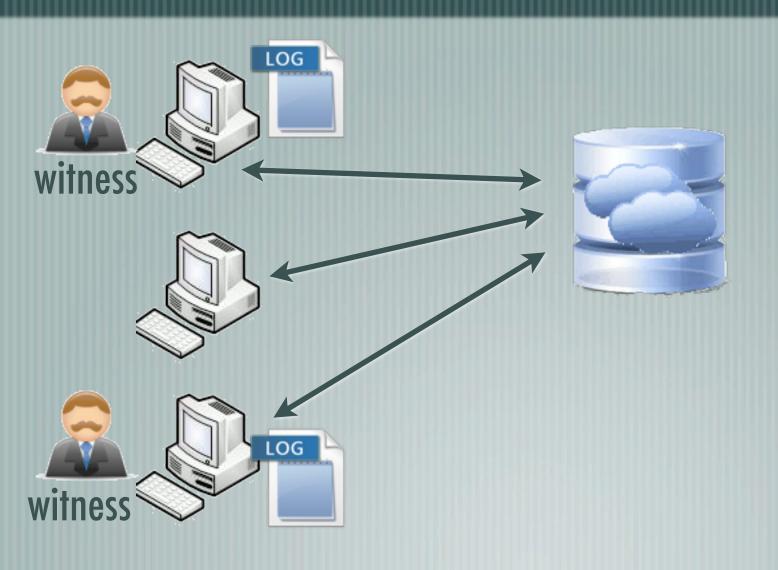

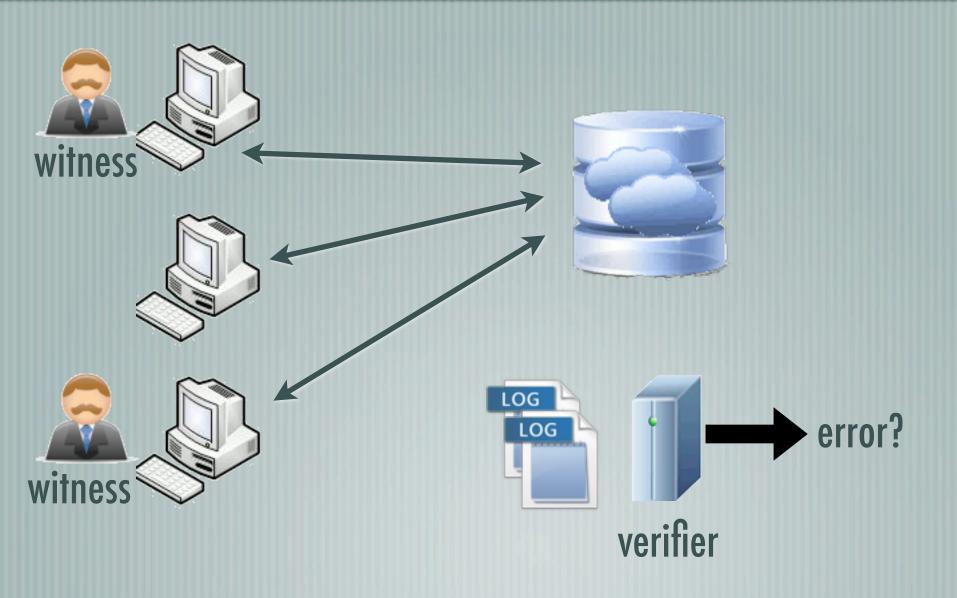

Web app ops as data-store ops

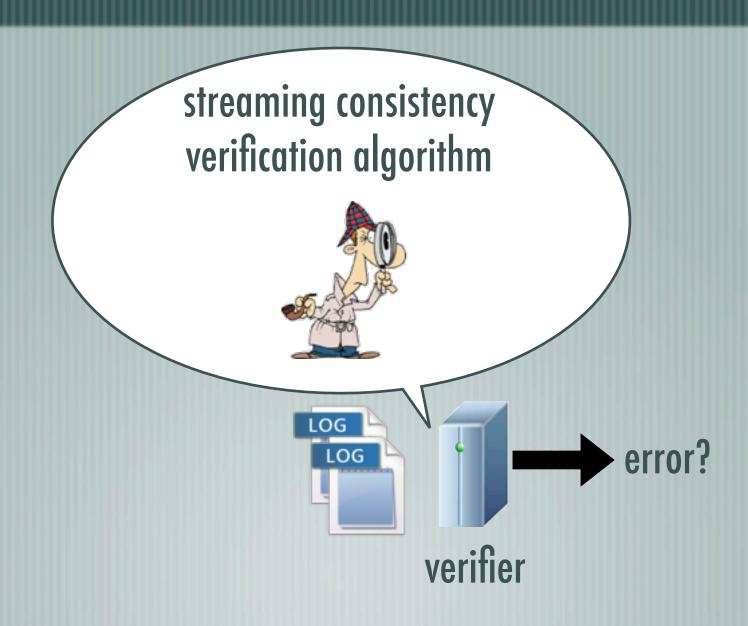

EVE: different use cases

Ensure that a web-app is running correctly in a particular cloud

Check how well a web-app scales in a particular cloud

Compare quality of service (QoS) from different cloud providers
